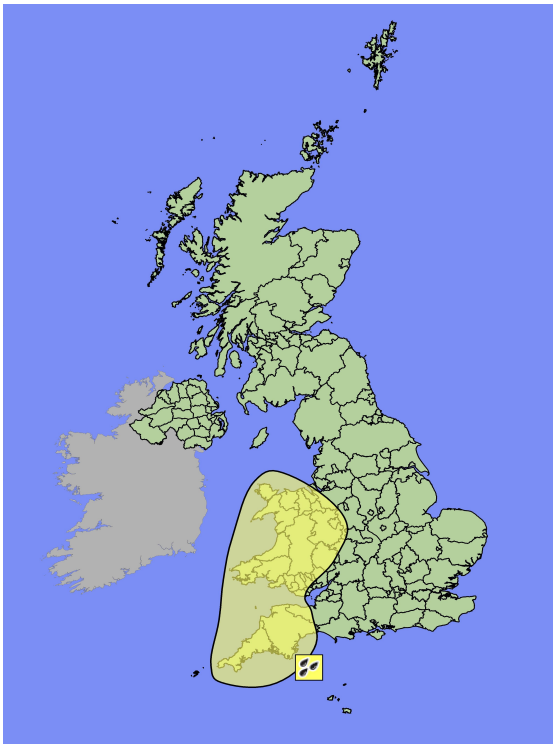
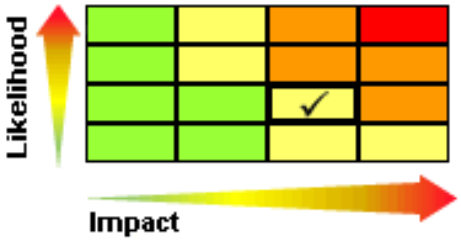
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure will be slow moving across southwest England and Wales during today, leading to the development of heavy showers and isolated thunderstorms. These showers could produce 10-20 mm of rain within an hour, whilst there is a low probability of 40-50 mm falling within 3 hours in north and west Wales, Cornwall and west Devon, all of which has the potential to cause localised flooding. However, due to the nature of showers, some places will miss them and stay dry.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:30 on Wed, 13th Jun 2012** until **22:00 on Wed, 13th Jun 2012**

Heavy, slow moving and potentially thundery showers will affect parts of Wales, west and southwest England during Wednesday. The public should be aware of the risk of localised flooding.
